ABM clip on handlebar ,raceClip': further sizes are planned!

D-Breisach, 06th Nov 2018 While the existing clamps of the 'raceClip' can only be mounted on forks with a diameter of 50 and 55 mm, the motorcycle part producer ABM now plans to expand the size range from January 2019.

Thus, the German manufacturer takes up his size expansion of his two other clip-on handlebars (version 'Tour' and 'Sport') which have already been supplemented by numerous standpipe diameters, last year.

With a clip on bar conversion you achieve an increase in the handlebar area, in particular. Depending on the type of the adjustable clip on bar and the motorbike model these increases may vary (multiClip Sport, multiClip Tour, raceClip). Depending on the model the clip on can also be set lower, if necessary.

Depending on the body type and the personal driving style the raceClip can be individually rotated in all directions and adjusted to any position. This makes this motorcycle clip on almost infinitely customizable - for an excellent seating comfort.

Special feature:

The steering tube is not a conventional one. It is 3° crooked. Thus, you can adjust the 'raceClip' even more individual to you. Due to this bend you gain additional leeway in height adjustment: here in the grip area. That reveals a further advantage concerning the seating comfort.

Safety:

A multiple clamping on the fork ensures a maximum safety. All ABM clip on handlebars are tested and certified to the highest safety standards. They all have a part certificate! So you can feel safe when you're on your way.
